Finite parameter geometry: $\tau = 100/\text{meV}$, $t_c = E_0 = 0.3$ meV; white: $d = 0$, orange: $F = 0.9$, red: $F = 0.99$

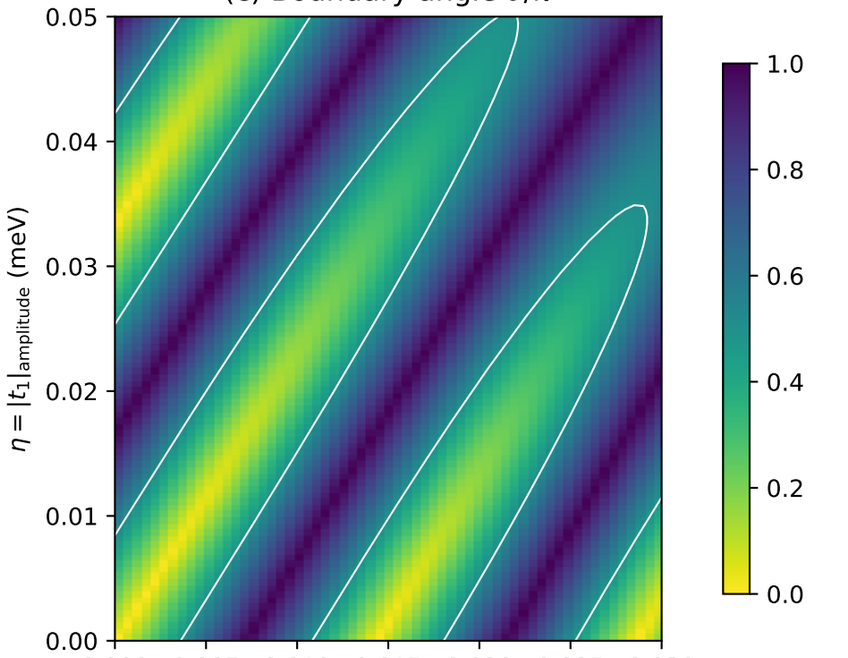

(a) Full-state fidelity

(b) Final orientation

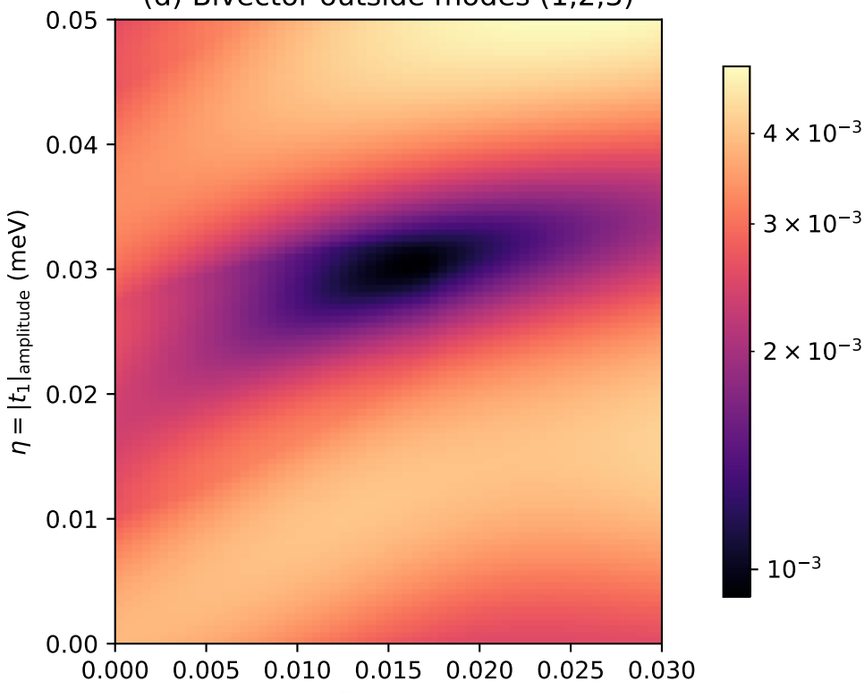

(c) Boundary angle θ/π

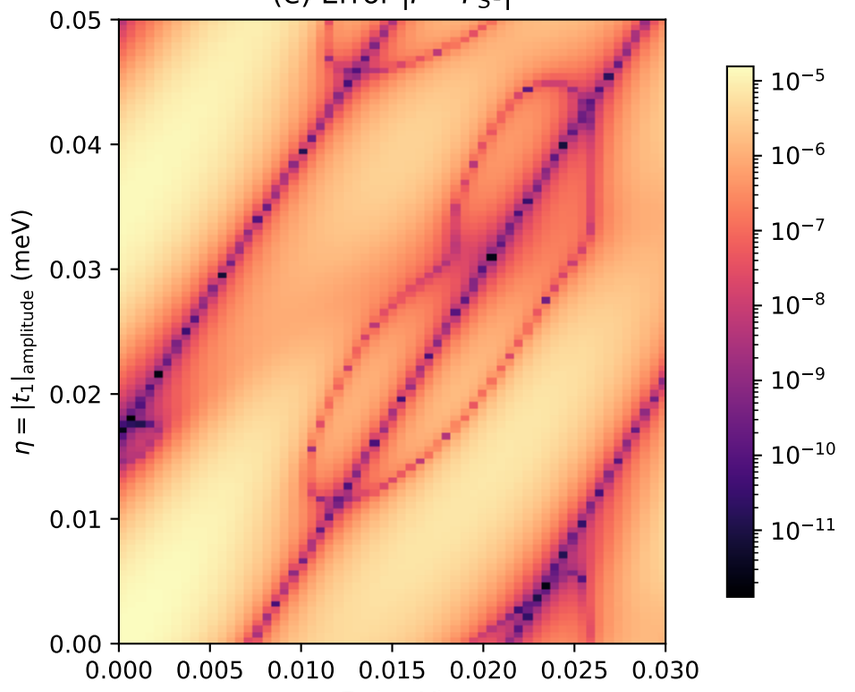

E_1 (meV)

(d) Bivector outside modes (1,2,3)

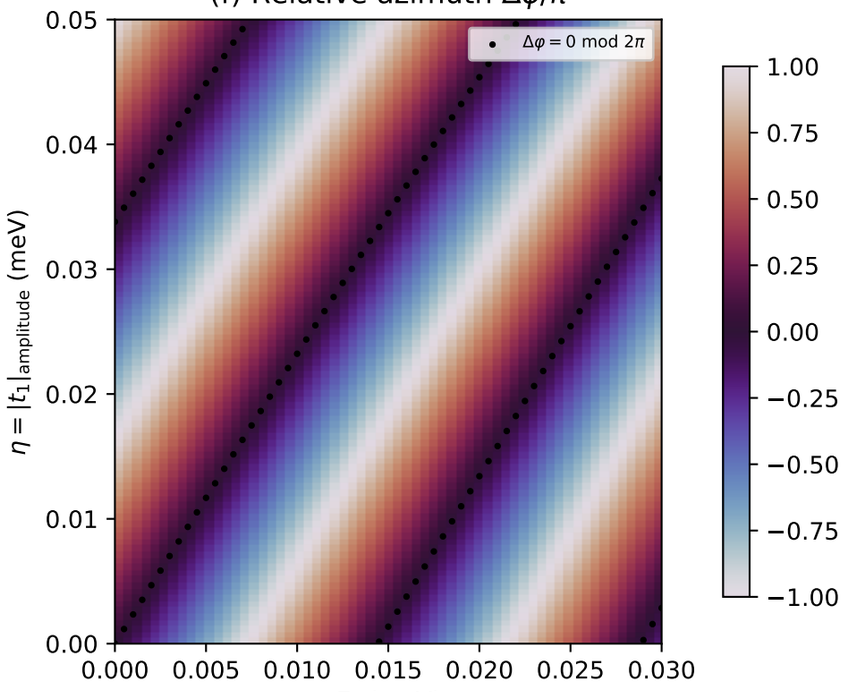

E_1 (meV)

(e) Error $|F - F_{S^2}|$

E_1 (meV)

(f) Relative azimuth $\Delta\varphi/\pi$

E_1 (meV)
