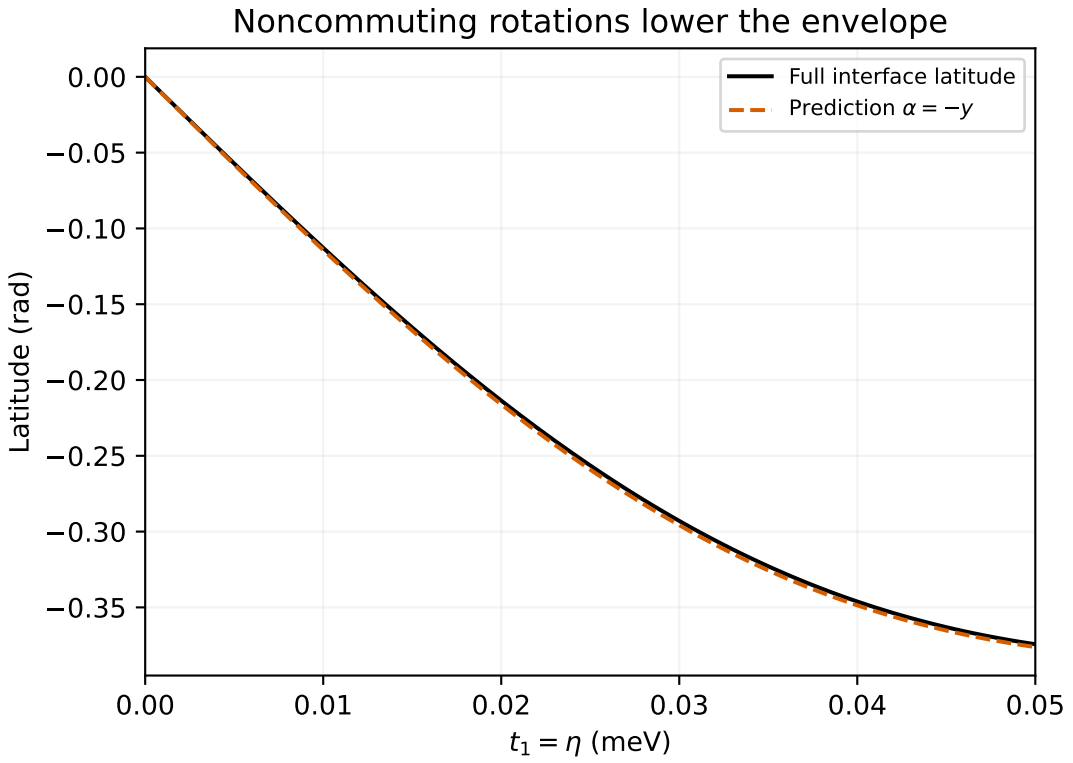
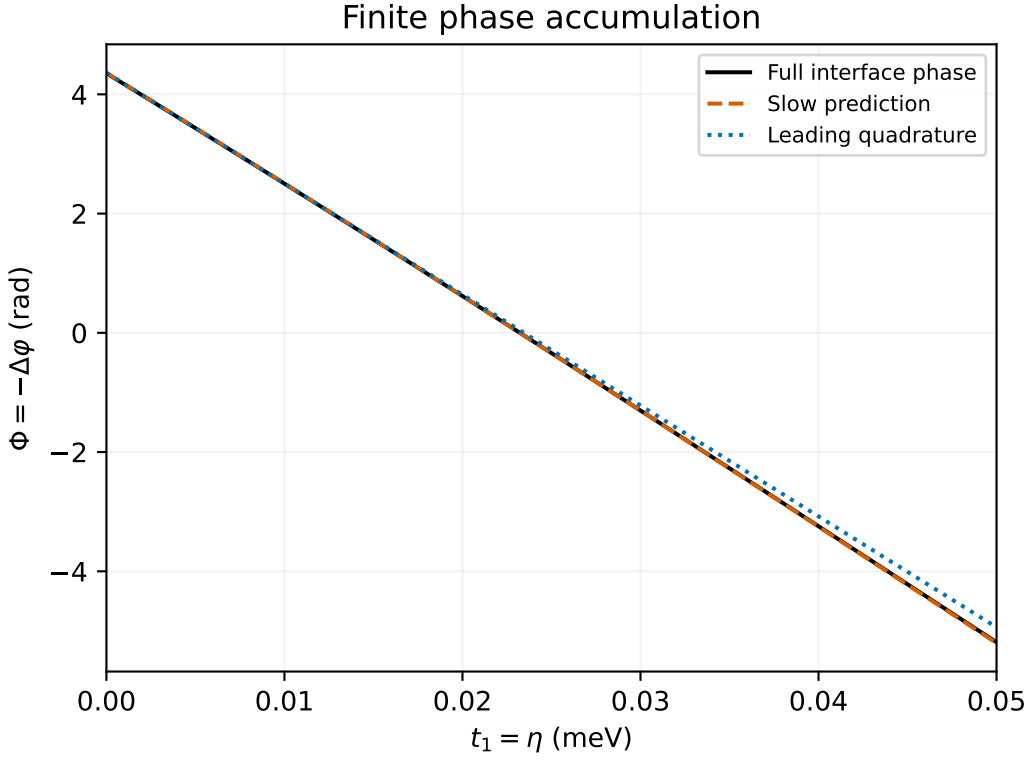
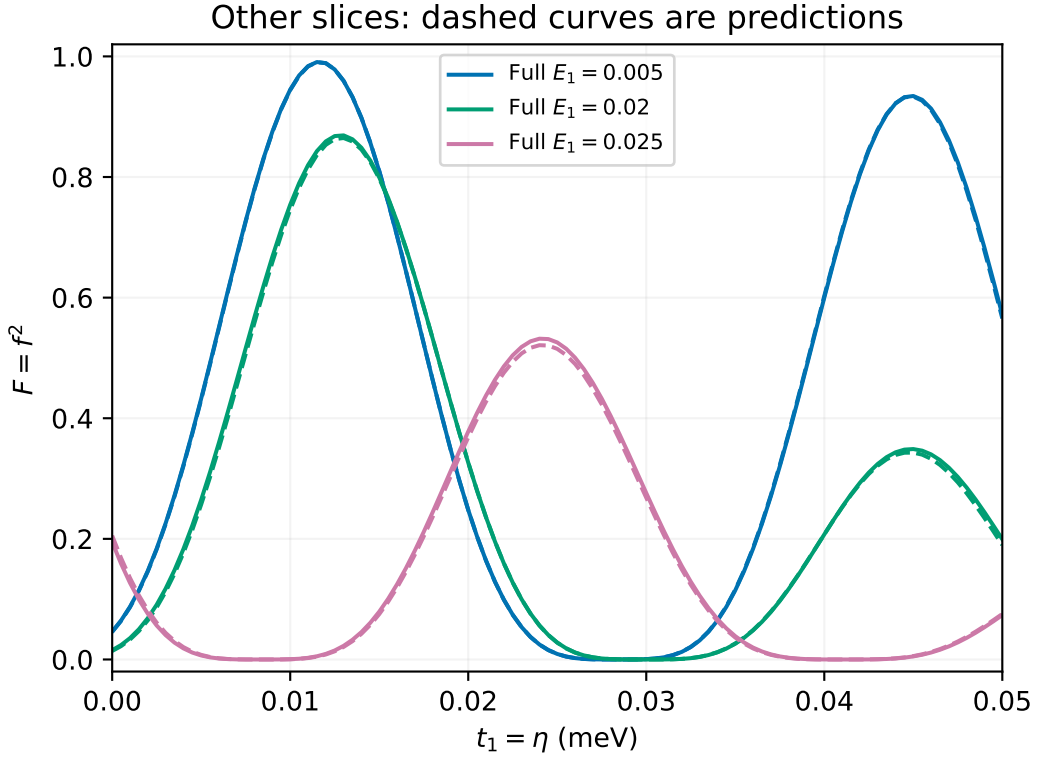
$E_1 = 0.01$ meV
Full model
Slow prediction
Leading phase alone
$F = f^2$
$t_1 = \eta$ (meV)



Noncommuting rotations lower the envelope
Full interface latitude
Prediction $\alpha = -y$
Latitude (rad)
$t_1 = \eta$ (meV)



Finite phase accumulation
Full interface phase
Slow prediction
Leading quadrature
$\Phi = -\Delta\varphi$ (rad)
$t_1 = \eta$ (meV)



Other slices: dashed curves are predictions
Full $E_1 = 0.005$
Full $E_1 = 0.02$
Full $E_1 = 0.025$
$F = f^2$
$t_1 = \eta$ (meV)
